Prevalence of specific mental health disorders and substance abuse disorders males .vs females

Multiple datasets with the:

1. Prevalence of alcohol use disorders males. vs females
2. Prevalence of drug use disorders males. vs females
3. Prevalence of anxiety disorders males. vs females
4. Prevalence of depression disorders males. vs females
5. Prevalence of bipolar disorders males. vs females
6. Prevalence of schizophrenia disorders males. vs females
7. Prevalence of eating disorders males. vs females

Institute of Health Metrics and Evaluation (IHME)
Reported in Global Burden of Disease (GBD)

- Collected from documentation of diagnoses
- Time span of 1990-2017
- Globally per country and region

Gapminder, HYDE (2016) and United Nations
Population Division (2019)

- Data constructed by a long-run population series, population estimates and population prospects, Moreover, data have been combined and labeled per continent.
- Time span of -10.000 to 2019
- Globally per country and region

World Health Organization (WHO) international
classification of Diseases (ICD).

- Time span 2015
- Global by country
- Collected from documentation of diagnoses

Age-standardized suicide rates (per 100 000 population) (MH_12)

- WHO
- The age-standardized mortality rate is a weighted average of the age-specific mortality rates per 100 000 persons, where the weights are the proportions of persons in the corresponding age groups of the WHO standard population.
- Measured data on deaths by cause, age and sex collected using national death registration systems or sample registration systems.
- More information: [https://www.who.int/data/gho/data/indicator/s/indicator-details/GHO/age-standardized-suicide-rates-\(per-100-000-population\)](https://www.who.int/data/gho/data/indicator/s/indicator-details/GHO/age-standardized-suicide-rates-(per-100-000-population))

Mental Illness: NAMI Report Deplores 80 Percent Unemployment Rate; State Rates and Ranks Listed - Model Legislation Proposed
Report including the findings regarding unemployment rates for public mental health service users. This includes rates on how many wish to work (60%) and receive supported employment opportunities provided by states (2%). Some basic information on models for improvement as proposed by NAMI is included.
The unemployment rate of adults with mental illness per state is collected using the SAMHSA Uniform Reporting System 2012.
