<b>Appendix A</b>	<b>8</b>
Origin of Musical Instruments	8
Vietnam War and the influence of culture on Music	9

# Presentation Materials

The presentation of the final visualizations were done through screen sharing a website, serving as the background of the presentation. Visualisations were displayed on this website through a combination of still images (of graphs made in Tableau, some edited in Photoshop), uploaded Tableau Public worksheets and an online WebGL build of a Unity project, hosted on the portfolio website of the university.

The website itself can be found at: <https://timvalskrant.wixsite.com/mijnsite>

# Description of datasets and workflow

## Rainer Pits - Vietnam War and the influence of culture on Music

### Visualization 1-3:

The first source was worldradiohistory.com, which has a vast library of digitized old radio journals and magazines. There I located the Billboard Hot Year-End Singles for the years 1965 to 1974. The second dataset came was a list of anti Vietnam War songs on Wikipedia. This list was the most comprehensive because it was created using a number of different sources.

“Text Search in Billboard Magazine 1930-2016.” *SEARCH: Billboard Magazine 1930-2016*, worldradiohistory.com/hd2/IDX-Business/Music/Billboard-IDX/search.cgi.

“List of Anti-War Songs.” *Wikipedia*, Wikimedia Foundation, 4 June 2020, en.wikipedia.org/wiki/List\_of\_anti-war\_songs#Vietnam\_War\_era.

### Additional sources:

I used a number of additional sources for decorative elements or for providing historical context. Because these do not relate specifically to the data, they can be found in Appendix A.

## Rares-Gabriel Negru - Record labels

### Visualisation 1:

“Expenses of U.S. record production and distribution companies 2007-2018”

Published by Amy Watson, Nov 27, 2019:

<https://www.statista.com/statistics/185342/expenses-of-us-record-production-companies-since-2005/>

- This dataset contains the estimated expenses of record production and distribution companies in the U.S.

### Visualisation 2:

“Top-selling albums of the 21st century in the U.S. 2000-2017”

Published by Amy Watson, Mar 11, 2019:

<https://www.statista.com/statistics/965686/top-selling-albums-21st-century-in-the-united-states/>

- This dataset shows the top selling albums of the 21st century in the U.S. over the time span of 15 years.

### **Visualisation 3:**

“Universal Music Group's revenue 2004-2019”

Published by Amy Watson, Mar 11, 2020:

<https://www.statista.com/statistics/273044/universal-music-groups-annual-revenue/>

- This dataset contains the annual revenue of the Universal Media Group record label.

### **Why were these sources chosen and where did I get them from?**

All of these sources are from [www.statista.com](http://www.statista.com). I chose them because they had easily accessible, valuable information about the music scene. This data is much more clear than all the rest that was found, thus, providing more accurate visualizations.

## Tim Yeung - Origin of Musical Instruments

### **Visualisation 1, Unity visualisation on lineage of instruments:**

Note that data for this visualisation was handmade as there were no existing datasets on lineage of musical instruments. Data was initially sourced from a website containing image visualisations of the lineage of instruments, which was then manually entered into an excel sheet. Some instruments were left out due to inaccuracies when cross-referencing with wikipedia entries, supporting entries from a database hosted on “instrumentsoftheworld.com” and occasional extra literature from other sources when the information from the former was not conclusive. Of course the data is heavily simplified as to put in every single instrument and subtype of instrument.

### **Visualisation 2, Map and Timeline visualisation:**

The map visualisations were based on the instruments of the first visualisation as I wanted to link the 2 visualisations together in a meaningful way. Data was once again compiled from the same sources as the above. Data used were the approximate century of invention and lat long coordinates of modern day locations which correspond with the historical locations of the places of invention. Some liberty was taken with the location data especially with older instruments as their precise origins are naturally not very well documented.

A full list of the used sources can be found in the appendix.

## Ilse Westra - Evolution of Popular and Classical Music

### Visualization 1:

“Instrumentation per Composer”

#### Sources:

The database which this visualization is based on is a combination of the Cross-Era and the Cross-Composer dataset of AudioLabs. These are two datasets containing 100 tracks of each of 11 composers of Western classical music.

AudioLabs - Cross-Era Dataset. (n.d.). Retrieved June 8, 2020, from

<https://www.audiolabs-erlangen.de/resources/MIR/cross-era>

AudioLabs - Cross-Composer Dataset. (n.d.). Retrieved June 8, 2020, from

<https://www.audiolabs-erlangen.de/resources/MIR/cross-comp>

### Visualizations 2-4:

“Change in Song Attributes”

“Average Position”

“Energy per Genre”

#### Source:

The dataset used for this visualization was extracted from Data World. The top 100 songs on Billboard of every week since February 1958 have been gathered in one part of these two datasets, the other one contains details per song, such as ‘instrumentalness’, duration, loudness and genre.

Billboard Hot weekly charts - dataset by kcmillersean | data.world. (n.d.). Retrieved June 8, 2020, from <https://data.world/kcmillersean/billboard-hot-100-1958-2017>

## Luukas Kiviniemi - Loudness war and Track length

### Visualisations 1-3:

“Average Loudness and Track Length of popular music 1972 - 2019”

“Average Loudness by Genre”

“Average Track Length by Genre”

#### Source:

Billboard Hot weekly charts - dataset by kcmillersean | data.world. (n.d.). Retrieved June 8, 2020, from <https://data.world/kcmillersean/billboard-hot-100-1958-2017>

This dataset contains 2 files. The first one contains the top 100 Billboard weekly charts from 1958 to 2019. The second file contains metadata (loudness, track length, instrumentalness etc.) from the Spotify (Echonest) API for each song listed in the first file. Both files contain a SongID column, which acts as a key to connect the two datasets.

**Visualisation 4-5:**

“U.S. Music Revenue by Format”

“Market Share by Format”

**Source:**

U.S. Sales Database - dataset by the RIAA (Recording Industry Association of America).

Retrieved June 7, 2020, from <https://www.riaa.com/u-s-sales-database/>

A database by the RIAA that contains the yearly revenues of the United States music industry per musical format (CD, vinyl, download, streaming etc.) for 1973 to 2019. The data is very comprehensive and the database website already has a visualisation made with Tableau.
